Gondi Irrigation Information System (GIIS) Help Manual - Water Users Co-operative Society

WUCS role

1.0 Login

In the WUCS role an option to view irrigation assets, generate reports and to record Khatedar details have been provided. To view functionalities, user has to click on “Login” link as highlighted in Fig. 1.1.

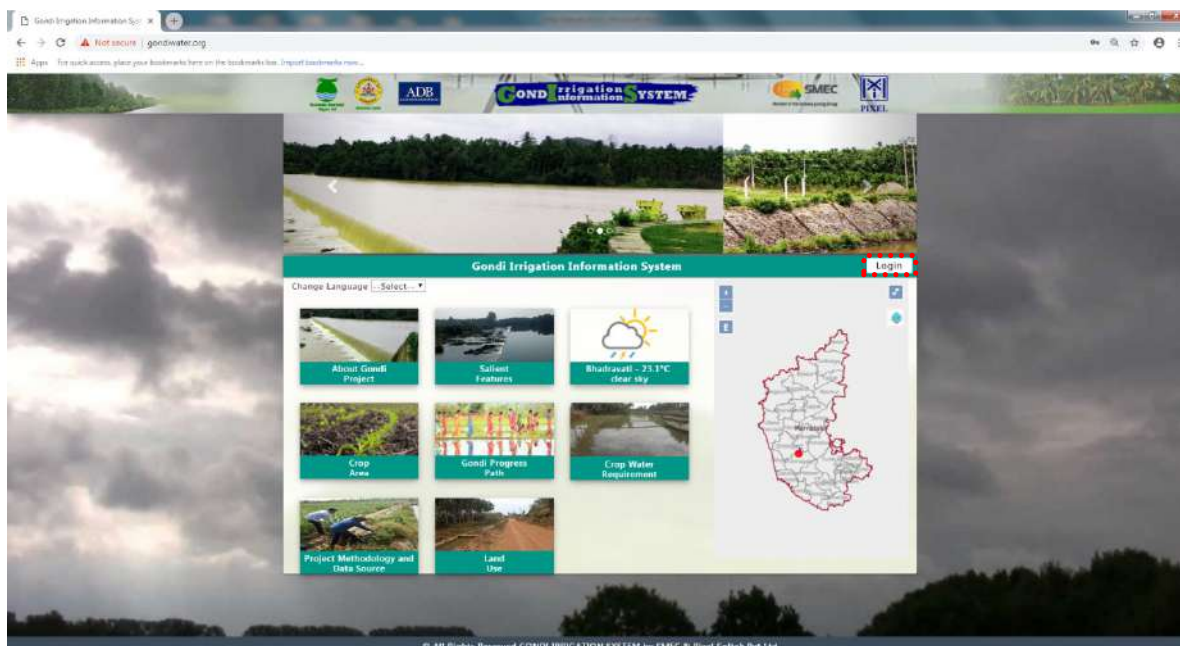

Fig. 1.1

By clicking on “Login” link application will display login window. In this window user has to enter login credentials (User name and Password) and has to click on “LOGIN” button as shown in Fig. 1.2.

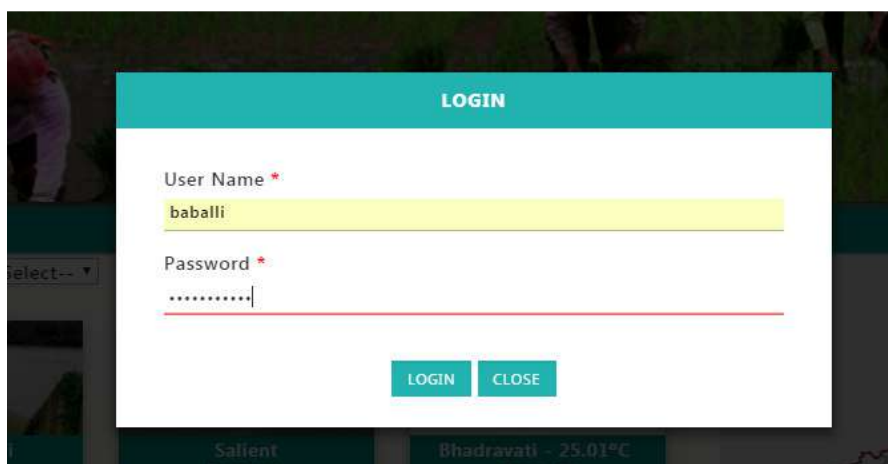

Fig. 1.2

Upon successful login, application will open Dashboard of the WUCS as shown in Fig. 1.3.

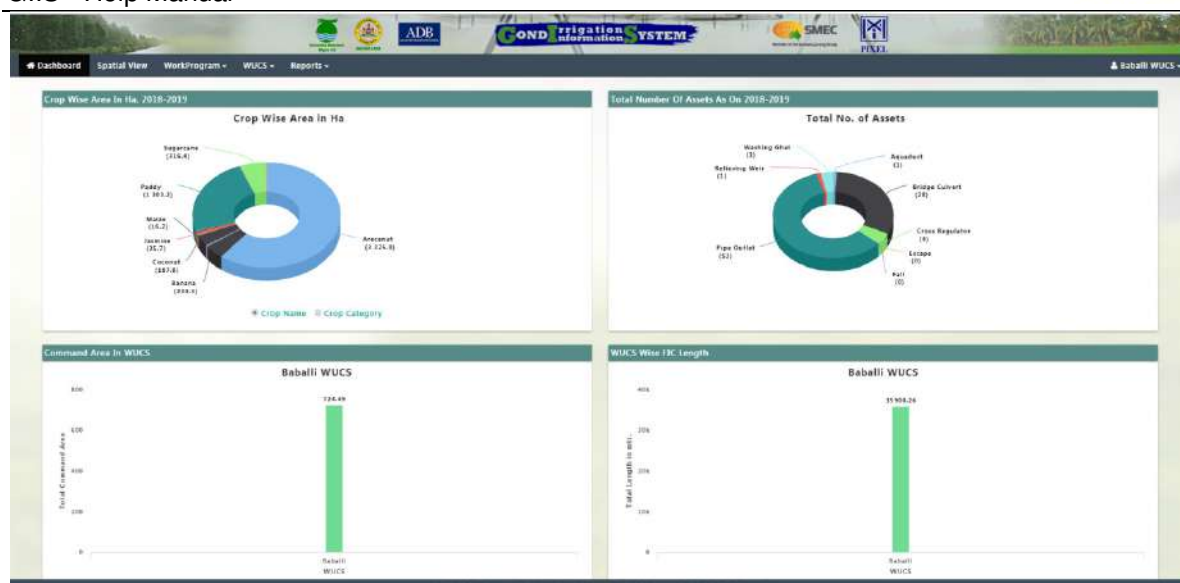

Fig. 1.3

2.0 Land Holding mapping and capturing Khatedar details

2.1 Farmer's holding mapping

Generally using Mobile application, Farmer's holding are being mapped. However, an alternative option to map Farmer's holding at lab is provided under WUCS login. In order to do this, user has to click on menu "WUCS". By clicking this menu, system will display two sub menus. Then user has to click on "Grouping of Parcel" sub menu to create farmer's holding as highlighted in Fig. 2.1.1.

Fig. 2.1.1

By clicking on Grouping of Parcel sub menu, system will open interactive GIS map of entire Gondi Project with an option to select logged in WUCS as shown in Fig. 2.1.2.

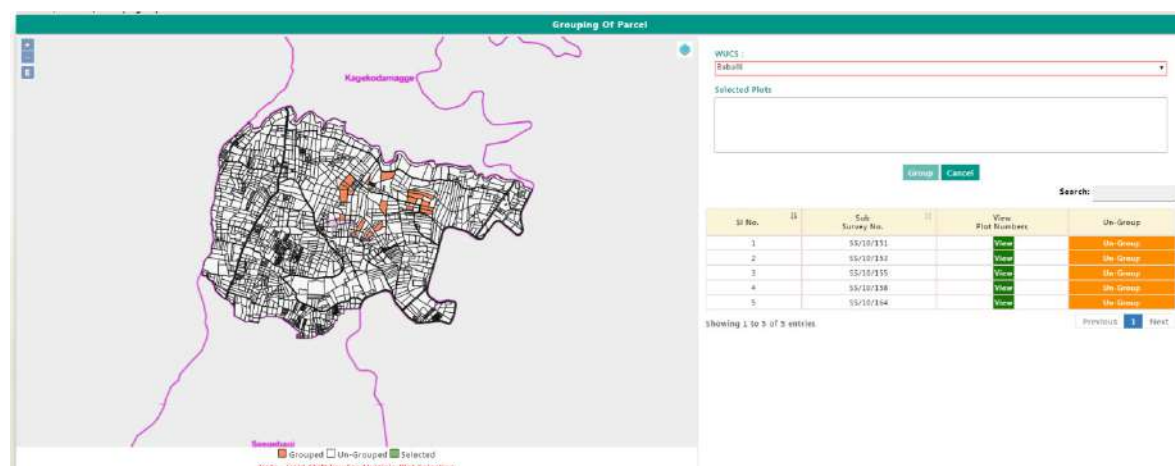

Fig. 2.1.2

In the interactive GIS map, facility to On and Off particular is provided under layer icon . Click on this icon would display list of GIS layers.

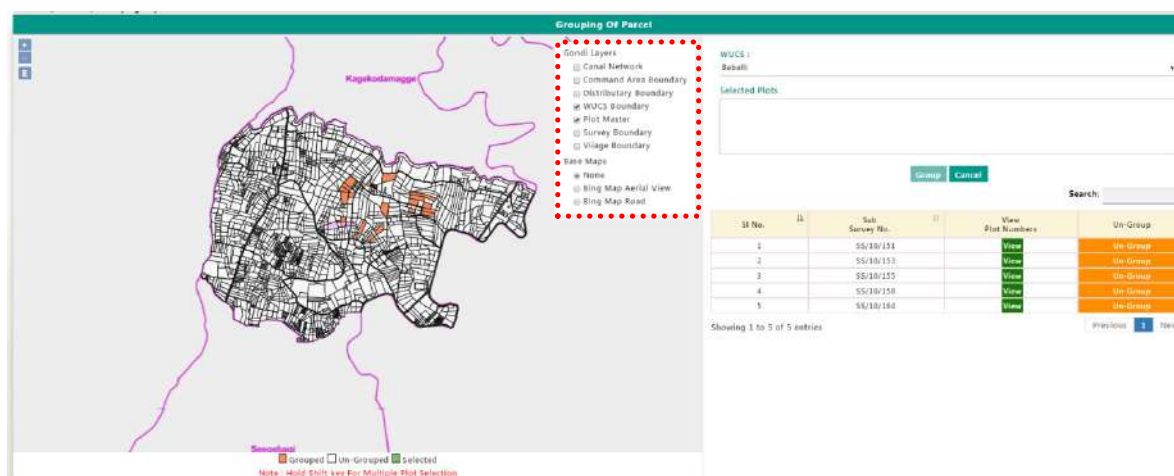

Fig. 2.1.3

User can make individual or multiple layers ON or OFF by clicking on square button provided against each layer as highlighted in Fig. 2.1.3. By activating (ON) Bing map Aerial View, map window will appear as shown in Fig. 2.1.4. User can zoom the map to required extent and compare the features with reference to satellite image. This will help farmer to identify his parcels by comparing the associated features visible on satellite image.

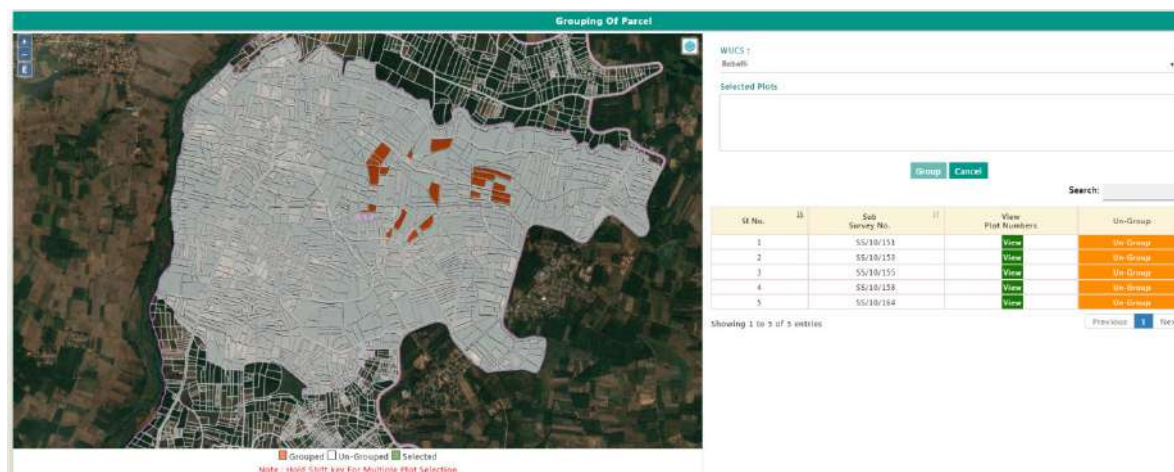

Fig. 2.1.4

Then using mouse, user has to click on required parcel. Selected parcel gets highlighted and number gets displayed under Selected parcel box. To select multiple parcels, user has to click on multiple parcels by holding Shift key. All the selected parcels number gets displayed under parcel box and highlighted in interactive GIS map. After ascertaining selection is correct, user has to click on "Group" button as highlighted in Fig. 2.1.5.

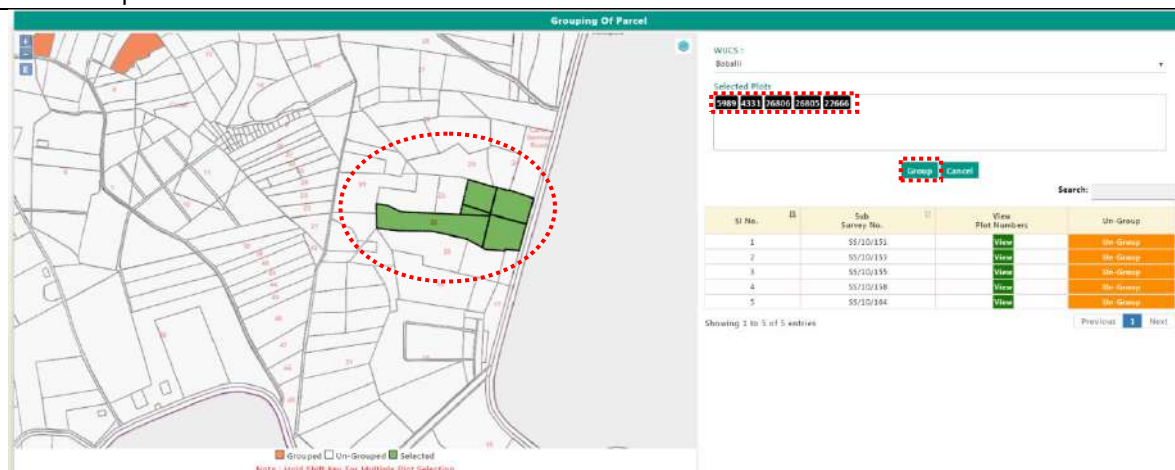

Fig. 2.1.5

By clicking on Group button, system will display the appropriate message and record gets displayed in a grid with an option to view and un group parcels if required as highlighted in Fig. 2.1.6. Each group an unique ID will be created and further allows user to record ownership details.

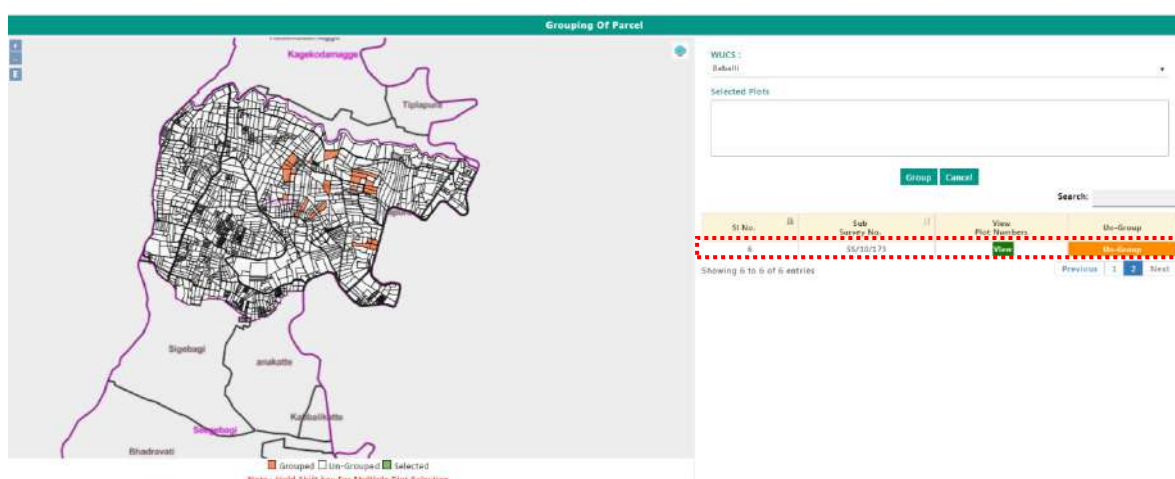

Fig. 2.1.6

2.2 Khatedar details

After grouping the parcels, system facilitates user to record Khatedar details for each group of parcels. To record Khatedar details, user has to click on menu "WUCS". By clicking this menu, system will display two sub menus. Then user has to click on "Khatedar Details" as highlighted in Fig. 2.2.1.

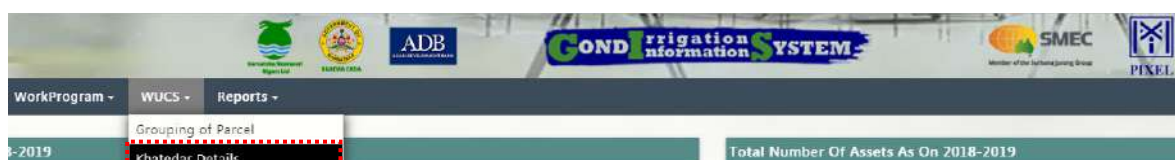

Fig. 4.2.1

By clicking on Khatedar Details sub menu, system will open form to record general information of Khatedar by selecting WUCS, Village, Survey number and unique Group ID as shown in Fig. 2.2.2.

Khatedar Details		
WUCS : -select-	Village : -select-	Survey No. : -select-
Sub Survey No. : -select-	Plot Numbers Of Selected Sub Survey No	
Khatedar Name : *	Gender : * -select-	Age :

Update Clear		

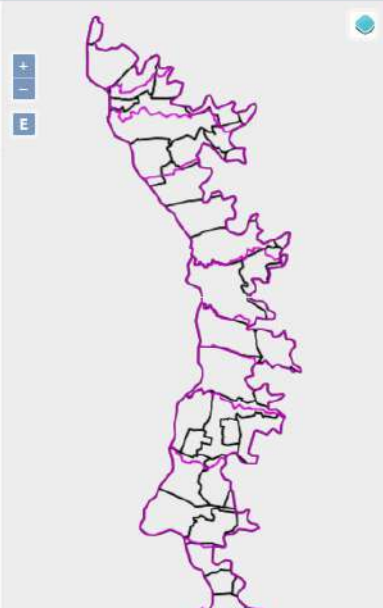

Fig. 2.2.2

Upon selecting this unique ID, system will display list of parcels grouped under this ID in non editable format and parcel locations get highlighted in the interactive GIS map as highlighted in the Fig. 2.2.3. After confirming the location and extent of these parcels, user can record Khatedar name, Gender, Age, WUCS membership No., Father / Spouse, Khata No., RTC No., Part Hissa No., Address, PIN code, Aadhaar No., Mobile No., Religion, Caste, Land type and Occupant name. After recording the information which are mandatory, user has to click on "Update" button. By clicking this button, system will display appropriate message and data gets linked to selected Group ID.

Update Clear

Fig. 3.3

Work requirements which have been added or updated at WUCS login will be loaded at Assistant Agriculture Officer (AAO) or Assistant Engineer (AE) or Senior Inspector (SI) role for scrutiny and preparing Work proposal as per selected Work approval wing.

4.0 Reports

4.1.1 Crop Information - Abstract Report

To generate abstract report containing extent of crops in logged in WUCS for a particular Year, Village and Season user has to click on "Abstract Report" sub menu provided under "Crop Information" of menu "Reports" as highlighted in Fig. 4.1.1.

Fig. 4.1.1.1

By clicking "Abstract Report" sub menu, application will open form containing drop down lists to select Year, WUCS, Village, Season, Crop Category and Crop name where Year selection is mandatory. An option to generate report by selecting All or individual parameter for a particular year is provided as shown in Fig. 4.1.2.

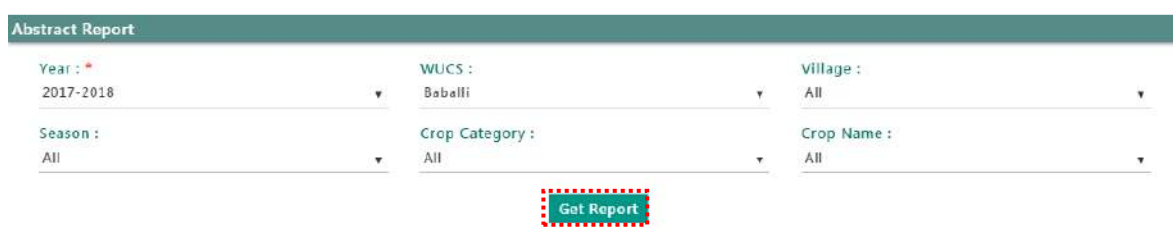

Fig. 4.1.1.2

After selecting the required parameters from the drop down lists, user has to click on button "Get Report" as highlighted in Fig. 4.1.1.2. Upon clicking this button, application will generate report containing category wise extent of crop with an option to export the same to PDF / Excel format as shown in Fig. 4.1.1.3.

Extent of Crops in WUCS - Baballi / Village - All / Year - 2017-2018 / Season - Rabi,Annual,Perennial

-	13.8837442100, 75.7381729800	
-	13.8839177700, 75.7351738700	
-	13.8870931100, 75.7250581100	
-	13.8784904500, 75.7366787200	
2017	13.8803149800, 75.7178606300	

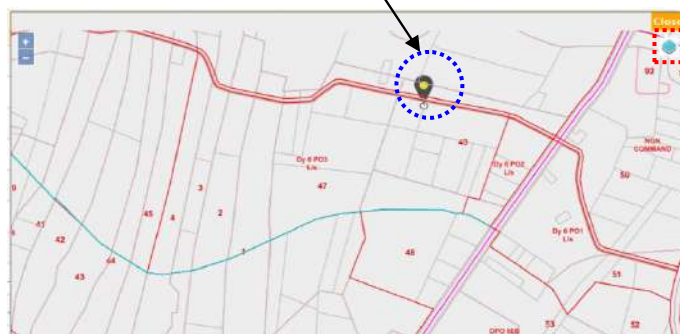

Fig. 4.4.6.4a

Fig. 4.4.6.4b

Similarly, click on  thumbnail image provided against each bridge / cart bridge / culvert will display Photograph of selected bridge / cart bridge / culvert as highlighted in Fig. 4.4.6.4b.

4.4.7 Structure Details Report

To generate report containing details of various structures (Aqueduct, Regulator, Inlet, Relieving weir, Fall, Washing Ghat, Escape) present under All or individual WUCS, user has to click on "Structure Details Report" sub menu provided under "Asset Report" of menu "Reports" as highlighted in Fig. 4.4.7.1.

Fig. 4.4.7.1

By clicking on "Structure Details Report" sub menu, application will open form to select different structures and WUCS from drop down lists as shown in Fig. 4.4.7.2.

Fig. 4.4.7.2

After selecting the required structure and WUCS from the drop down lists, user has to click on "Get Report" button as highlighted in Fig. 4.4.7.2. Upon clicking this button, application will display report containing structure type, status, chainage, discharge construction year, condition and hyperlinks to view location and photograph of structure with an option to export the same to PDF and Excel formats as shown in Fig. 4.4.7.3.

List of Aqueduct in Baballi WUCS

PDF	Excel	SI No.	Aqueduct Type	Pipe Diameter (mtr.)	Vent Height (mtr.)	Vent Width (mtr.)	Start Chainage (mtr.)	End Chainage (mtr.)	Aqueduct Length (mtr.)	Structure Condition	Construction Year	Location	Photo
		1	Box	-	-	-	140	150	50	Good	-	13.8834745600,75.7431022700

Fig. 4.4.7.3

Click on [Latitude & Longitude](#) hyperlink provided against each structure will open GIS map showing location of selected structure. User can activate or deactivate layers by using Layer Display tool as highlighted in Fig. 4.4.7.4a.

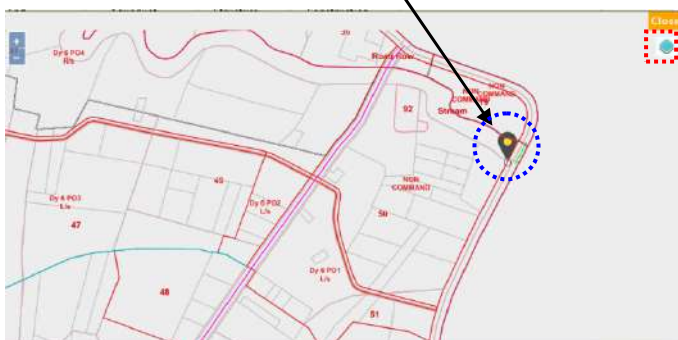

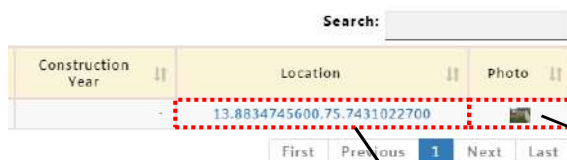

Fig. 4.4.7.4a

Fig. 4.4.7.4b

Similarly, click on  thumbnail image provided against each structure will open Photograph of selected structure as highlighted in Fig. 4.4.7.4b.

5.0 Spatial view

To view Gondi Irrigation System with reference to spatial context and to get layer wise attributes user has click on "Spatial View" menu as highlighted in Fig. 5.1.

Fig. 5.1

Click on "Spatial View" menu will open interactive GIS map containing Map tools, Layers and Map window as shown in Fig. 5.2.

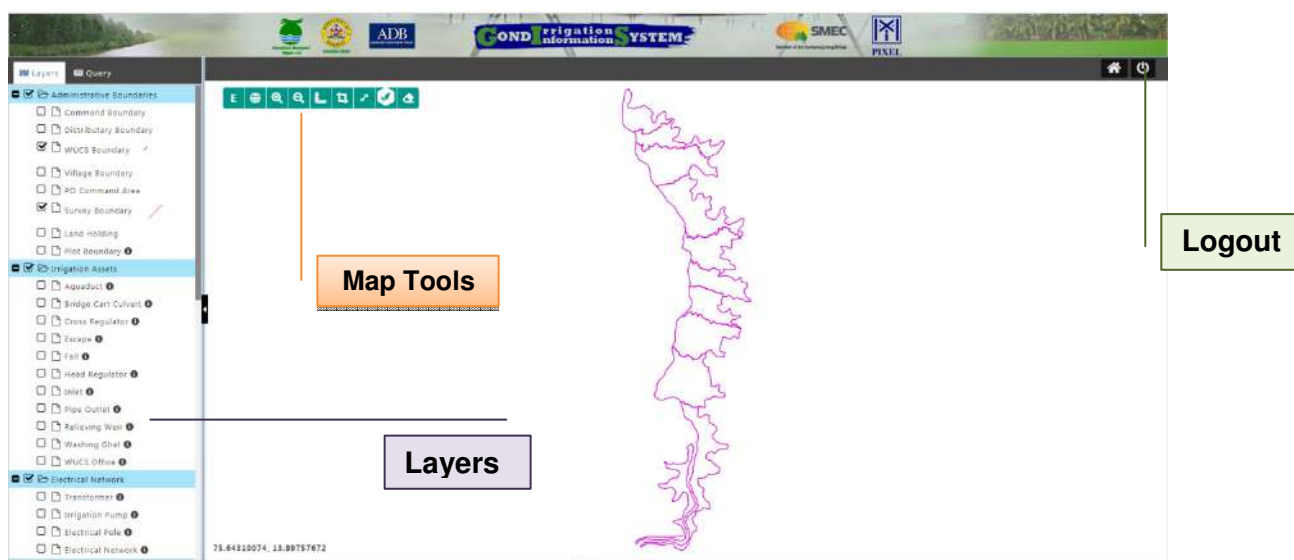

Fig. 5.2

By default map window displays command area of Gondi Irrigation System with WUCS boundaries as shown in Fig. 5.2. To ease map navigation and better visualization of map content, tools have been provided. The map tool bar is as shown in Fig. 5.3.

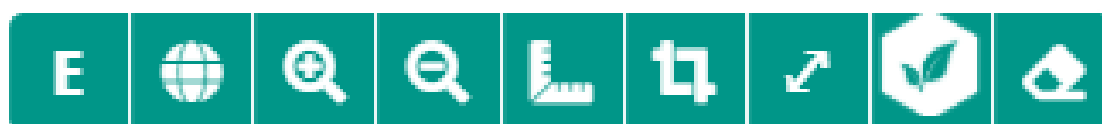

Fig. 5.3

The functionality of each tool is as follows;

E - Fit to extent - In order to view full extent of the map from any zoom level, user has to click on this button.

- **Drag on map to zoom** - By clicking on "Drag on map to zoom" button, user will be able to zoom the map to required extent by pressing left hand side button of mouse and dragging on specific area on map. After dragging to required extent, user has to release the mouse button. Upon releasing the button, the application will increase the zoom level of selected area of map.

- **Zoom In** - By clicking on "Zoom In" button, user will be able to increase the zoom level of entire map. To increase the Zoom level to required extent, user has to click this button multiple times. For every click map zoom level increases.

- **Zoom Out** - By clicking on "Zoom Out" button, user will be able to reduce the zoom level of entire map from the existing level. To reduce the Zoom level to required extent, user has to click this button multiple times. For every click map zoom level reduces till it reaches least zoom level set.

- **Measure Length** - To measure distance between two points on map, user has to click on "Measure Length" button. Prior to measuring the distance between two points, user has to keep the map extent to desired level, so that both the points are clearly visible on the map window. After getting required map extent, user has to click on "Measure Length" button. Then user has to identify starting point of measurement by clicking left hand side mouse button. As the mouse is moved, measurement path is shown in dotted line with distance. To measure the curved distance, user can click LHS mouse button multiple times till end point. Upon reaching the end / destination point, user has to double click the LHS mouse button to terminate the measurement. Once terminated, application will display measured path with length in meters / kilometers.

- **Measure Area** - User has to keep the area to be measured within the map window. Then user has to click on "Measure Area" button. Further, user has to identify corner or start point of measurement by clicking LHS mouse button. Upon clicking, application will start displaying dotted line till the subsequent corner point is clicked. Upon clicking, application will form a closed polygon which can be stretched by clicking LHS mouse button at every corner point. For each click application will display area in sq.m / sq.km. After creating the area of interest, user has to terminate the process by double clicking LHS mouse button. Once terminated, application will display drawn polygon with area.

- **Toggle full-screen** - To view the map with full screen extent, user has to click on this button.

- **Multiple Plot Info** - In order to get details of multiple crop plots, user has to click on this button. Prior to clicking on this button, map has to be zoomed to plot boundary visibility level. Then user has to click on "Multiple Plot Info" button. After clicking this button, user has to click on crop plots to get details as shown in Fig. 2.4.

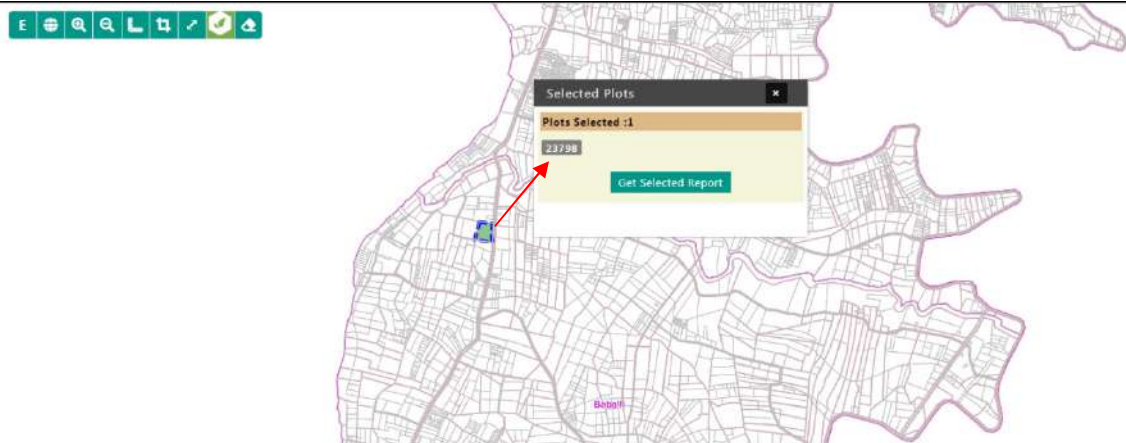

Fig. 5.4

Upon clicking the plot, application will open pop up window containing Plot ID and button to view crop details of that plot. By clicking on button "Get selected Report", application will display report with an option to Copy the report, export to Excel and Print as highlighted in Fig. 5.5.

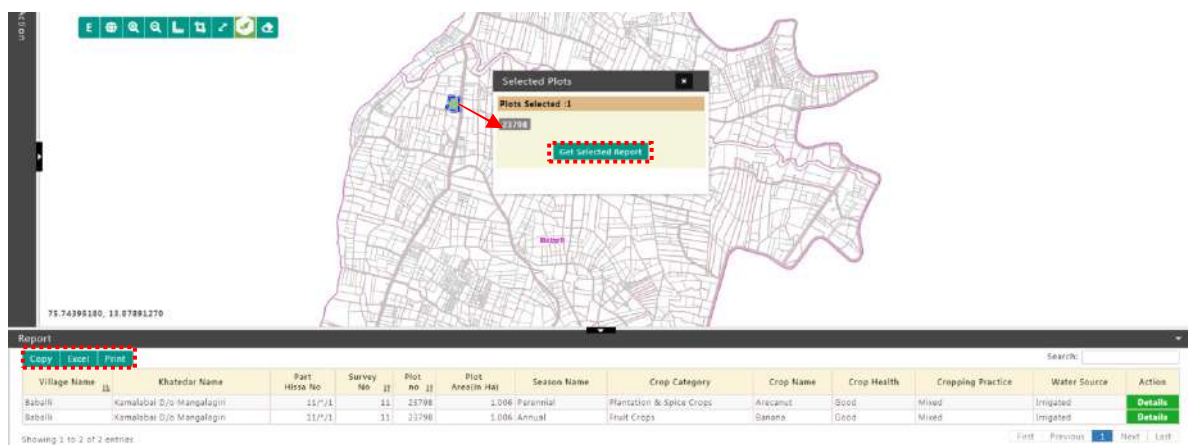

Fig. 5.5

To view photograph of plot, user has to click on "Details" button provided in last column of report as highlighted in Fig. 5.6. By clicking this button application will display photograph of crop plot with relevant information as shown in Fig. 5.6.

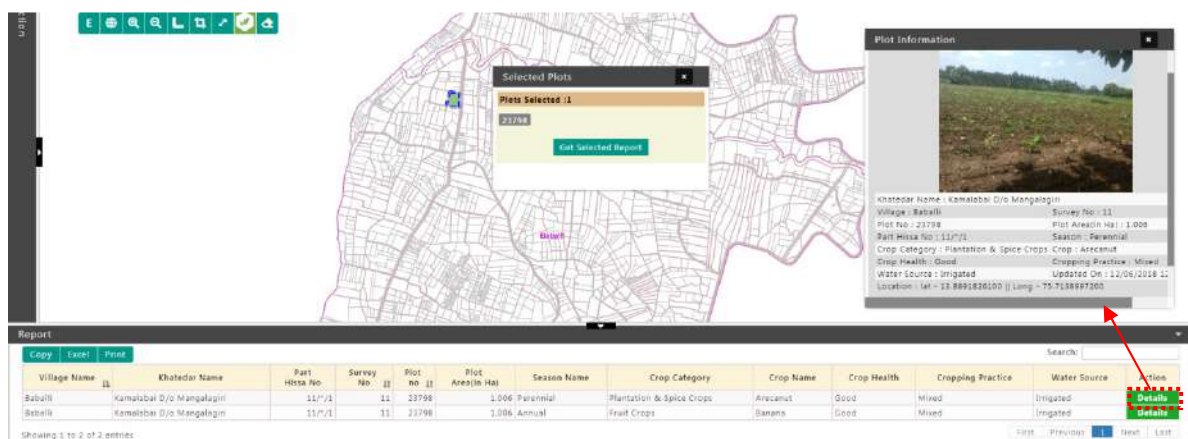

Fig. 5.6

In order to understand details of neighboring plots, user is allowed to select multiple plots one after the other and get information of the same. Plot details are getting appended in report for each plot selected on map as shown in Fig. 5.7.

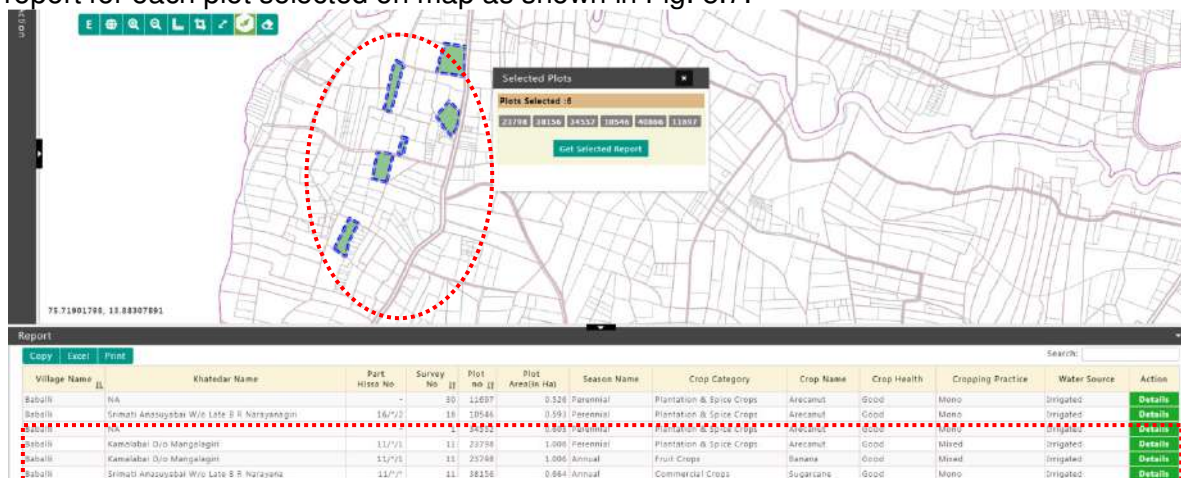

Fig. 5.7

- **Clear** - By clicking this button, application will close various information / process happened in the map viewing session.

- **Home** - By clicking this button, application will direct the user to Dashboard of GIIS

- **Logout** - By clicking this button, application will direct the user to Home page of GIIS

5.1 Layers

Gondi Irrigation Information System is a repository of various spatial layers grouped under thematic heads such as Administrative boundaries, Irrigation Assets, Electrical network, Transportation network, Canal network, Water resources, Irrigation source, Macro layers & Base maps as shown in Fig. 5.8.

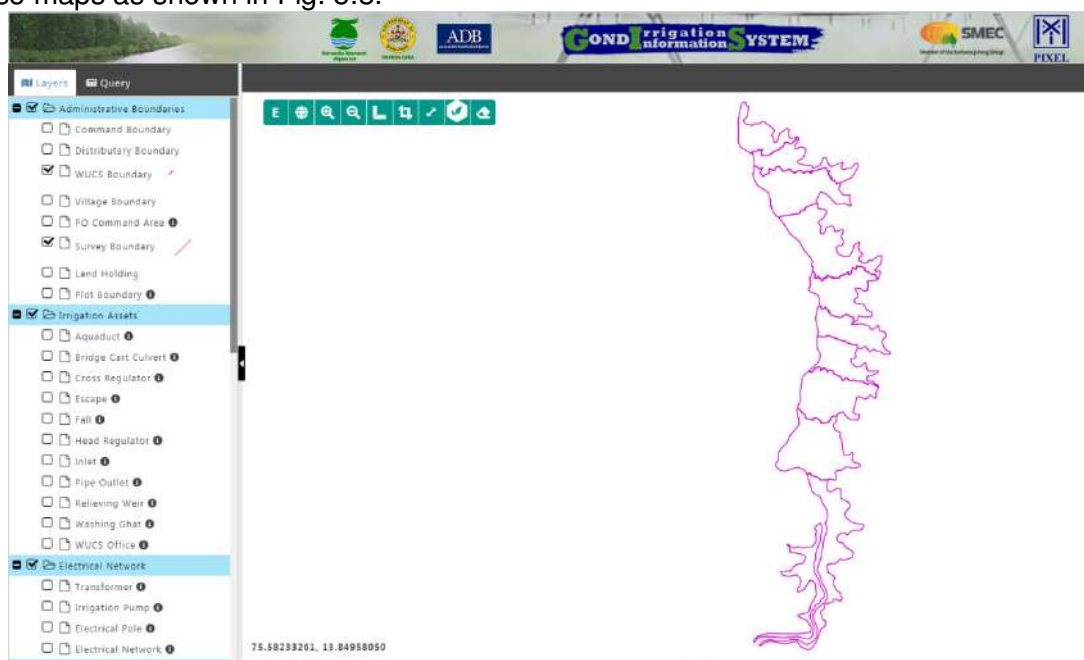

Fig. 5.8

Under **Administrative Boundaries**, following layers have been provided

- Command boundary
- Distributary boundary
- WUCS boundary
- Village boundary
- PO command area
- Survey boundary
- Land holding
- Plot boundary

When all the layers under Administrative boundaries are kept ON by clicking square button provided against each layer GIS map gets displayed as shown in Fig. 5.9.

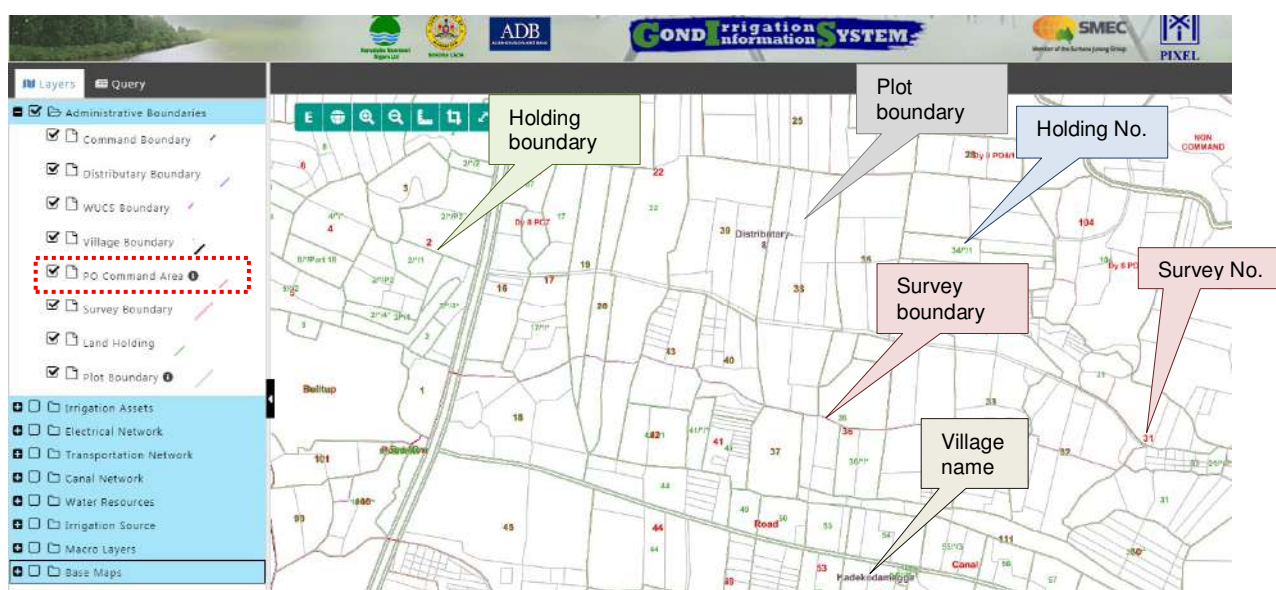

Fig. 5.9

Against each layer, symbol is shown and few layers with  icon. Presence of this icon against the layer indicates, user can view attributes of that layer by activating and clicking on map as shown in Fig. 5.10.

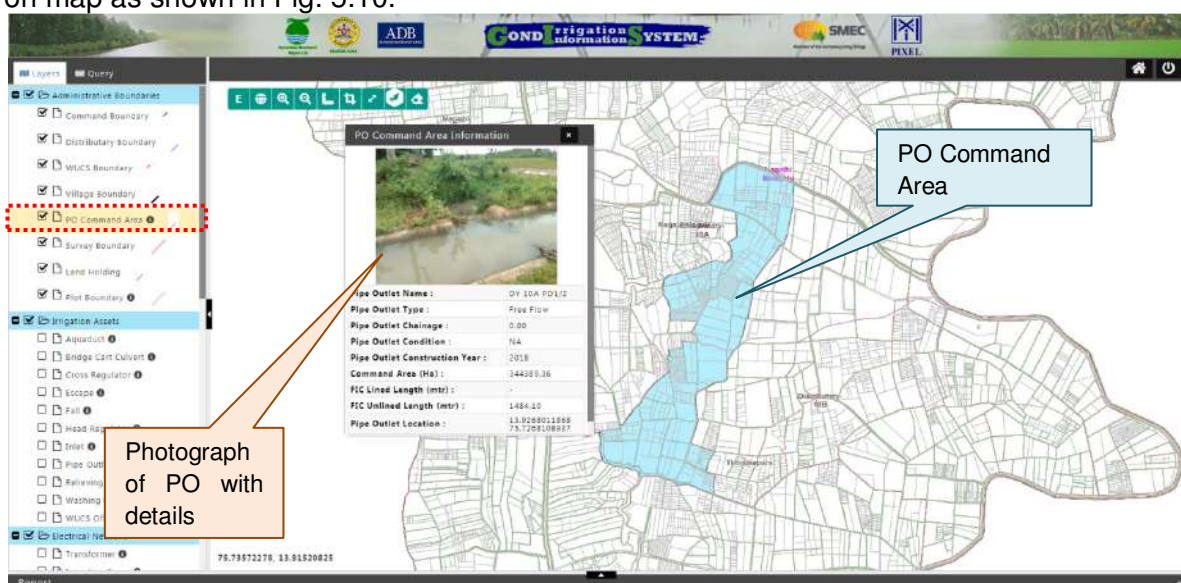

Fig. 5.10

Under **Irrigation assets**, following asset layers have been provided

- Aqueduct
- Bridge, Cart bridge, Culvert
- Cross Regulator
- Escape
- Fall
- Head Regulator
- Inlet
- Pipe outlet
- Relieving weir
- Washing Ghat
- WUCS Office

When all the layers under Irrigation assets are kept ON by clicking square button provided against each layer, GIS map gets displayed as shown in Fig. 5.11.

Fig. 5.11

Against each layer, asset symbol with  icon is shown. In order to view information of any asset, user has to activate that particular layer and click on required asset on map. Upon clicking the required asset, application will highlight that particular asset and pop up the window containing photograph and information as shown in Fig. 5.12.

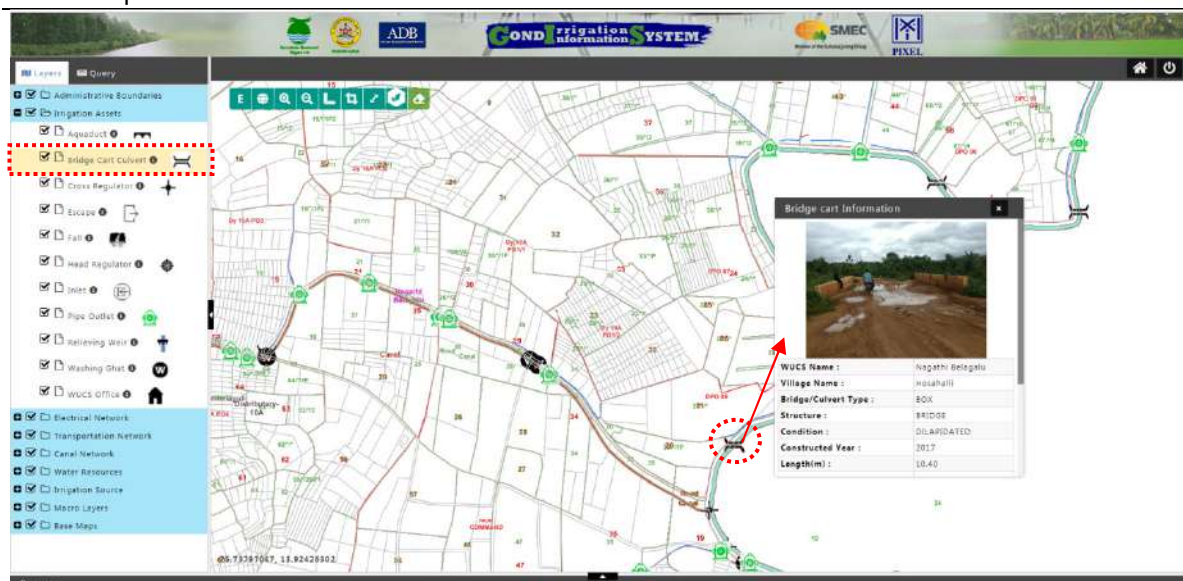

Fig. 5.12

Under **Electrical network**, following asset layers have been shown

- Transformer
- Irrigation pump
- Electrical pole
- Electrical line

When all the layers under Electrical network are kept ON by clicking square button provided against each layer, GIS map gets displayed as shown in Fig. 5.13.

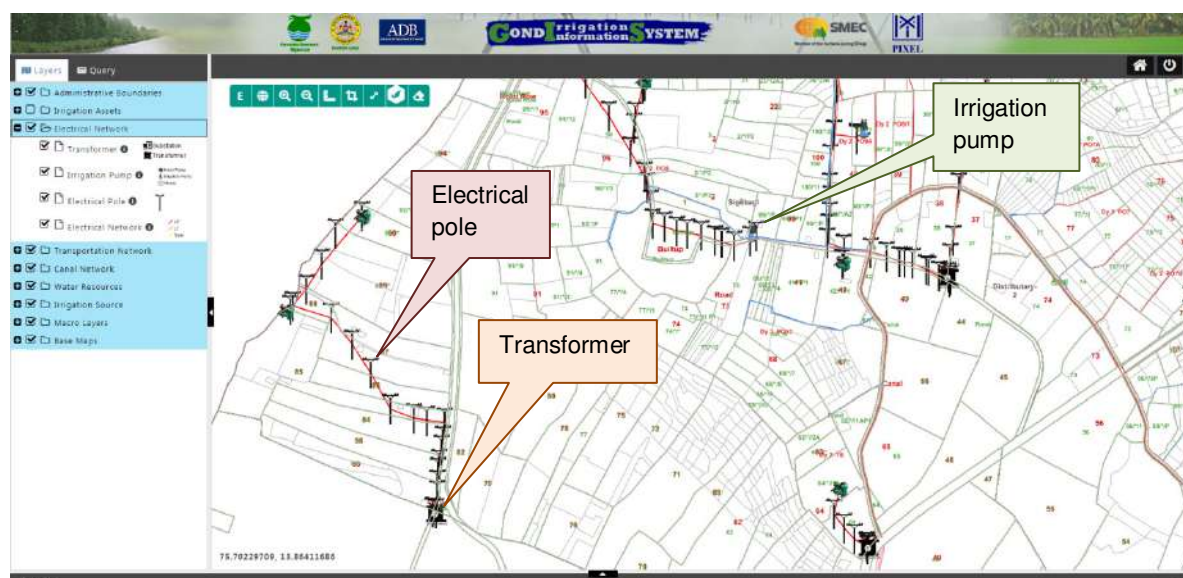

Fig. 5.13

Against each layer, asset symbol with  icon is shown. In order to view information of any asset, user has to activate that particular layer and click on required asset on map. Upon clicking the required asset, application will highlight that particular asset and pop up the window containing photograph and information as shown in Fig. 5.14.

Fig. 5.14

Under **Transportation network**, following layers have been shown

- Settlement
- Road network
- Built up

When all the layers under Transport network are kept ON by clicking square button provided against each layer, GIS map gets displayed as shown in Fig. 5.15.

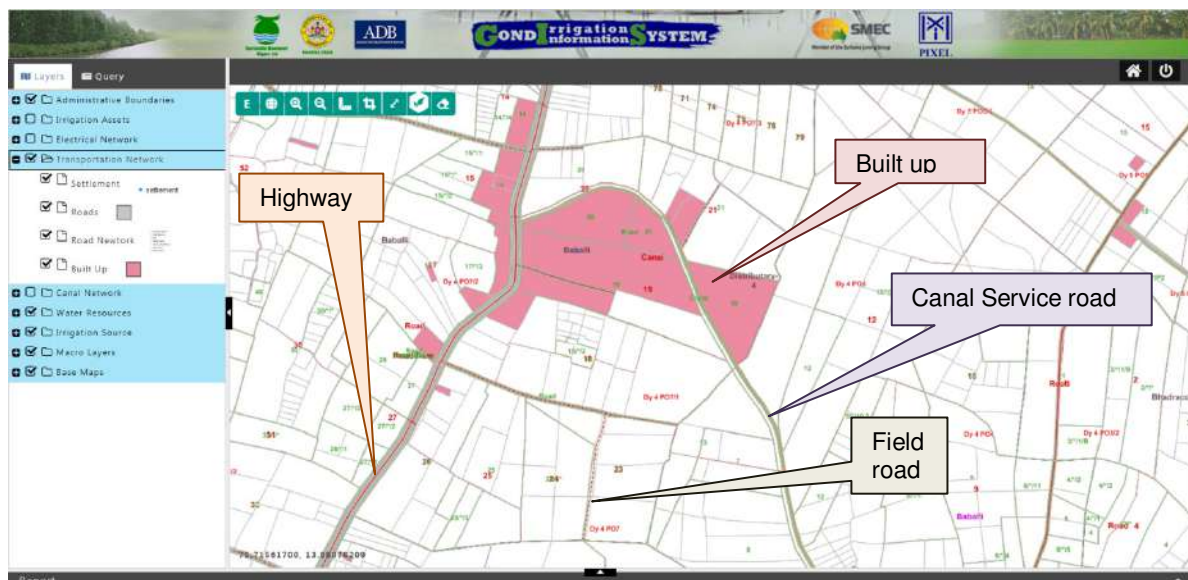

Fig. 5.15

Under **Canal network**, following layers have been provided

- Canal network
- FIC network

When all the layers under Canal network are kept ON by clicking square button provided against each layer, GIS map gets displayed as shown in Fig. 5.16.

Fig. 5.16

Asset symbol is shown against each layer. For FIC network  is shown indicating, user can view segment wise attribute for this layer. User has to activate this layer and click on required segment on map. Upon clicking the required FIC segment, application will highlight the same and pop up the window containing information as shown in Fig. 5.17.

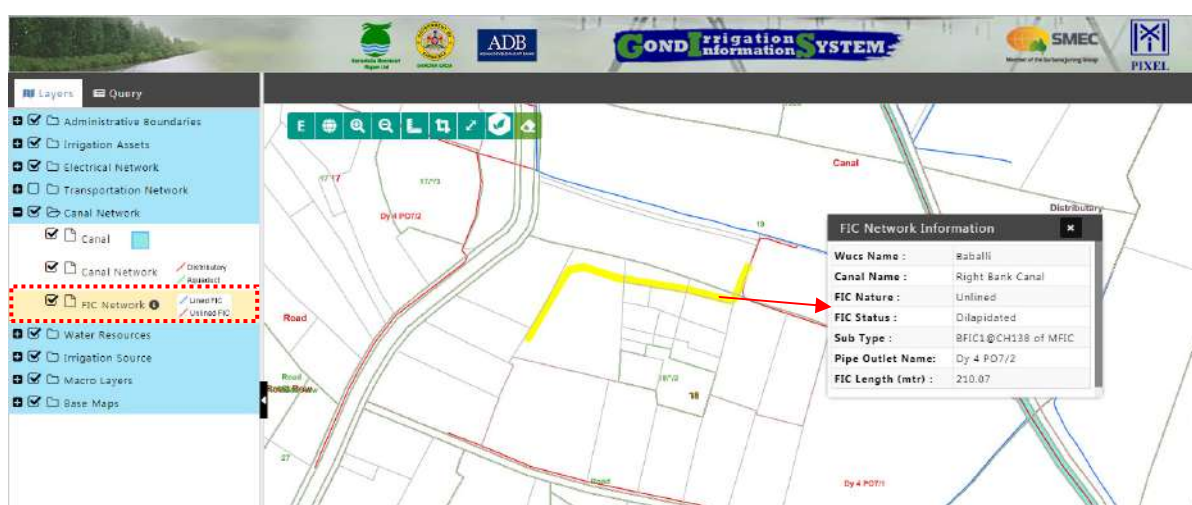

Fig. 5.17

Under **Water Resources**, following layers have been provided

- Stream
- Water bodies

When all the layers under Water resources are kept ON by clicking square button provided against each layer, GIS map gets displayed as shown in Fig. 5.18.

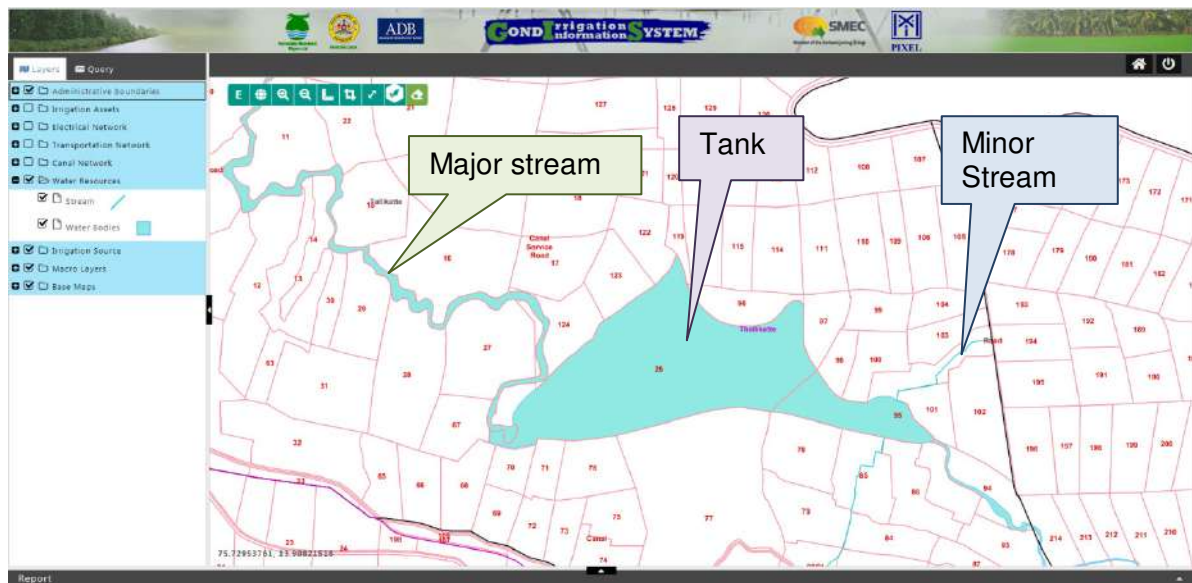

Fig. 5.18

Under **Irrigation source**, following layers have been provided

- Bore well
- Open well
- Farm pond

When all the layers under Irrigation source are kept ON by clicking square button provided against each layer, GIS map gets displayed as shown in Fig. 5.19.

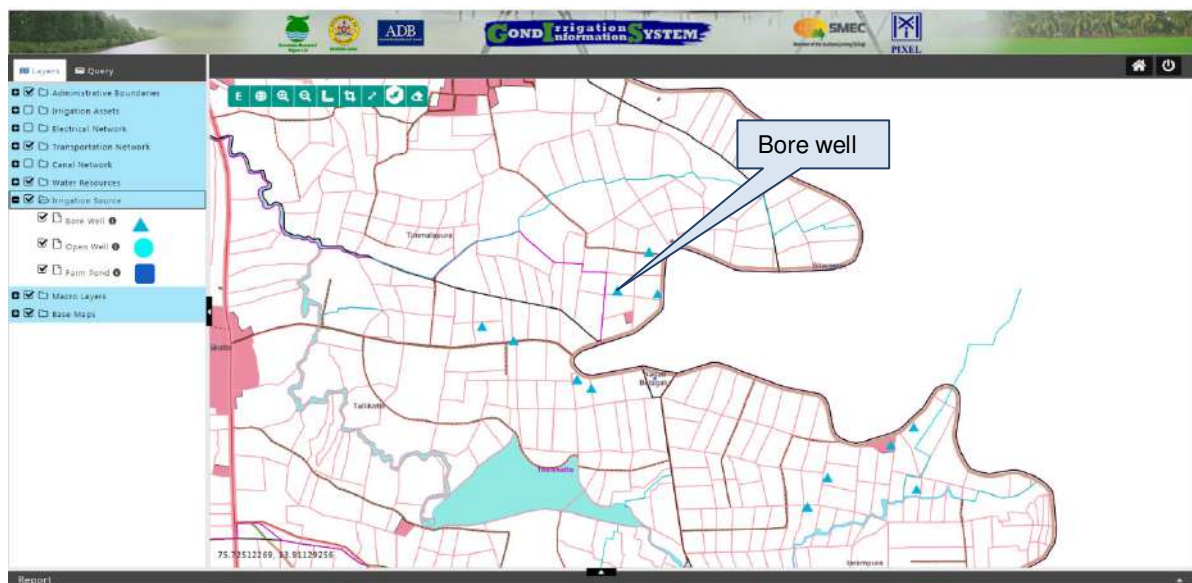

Fig. 5.19

Against each layer, asset symbol with  icon is shown. In order to view information of any asset, user has to activate that particular layer and click on required asset on map. Upon

clicking the required asset, application will highlight that particular asset and pop up the window containing photograph and information as shown in Fig. 5.20.

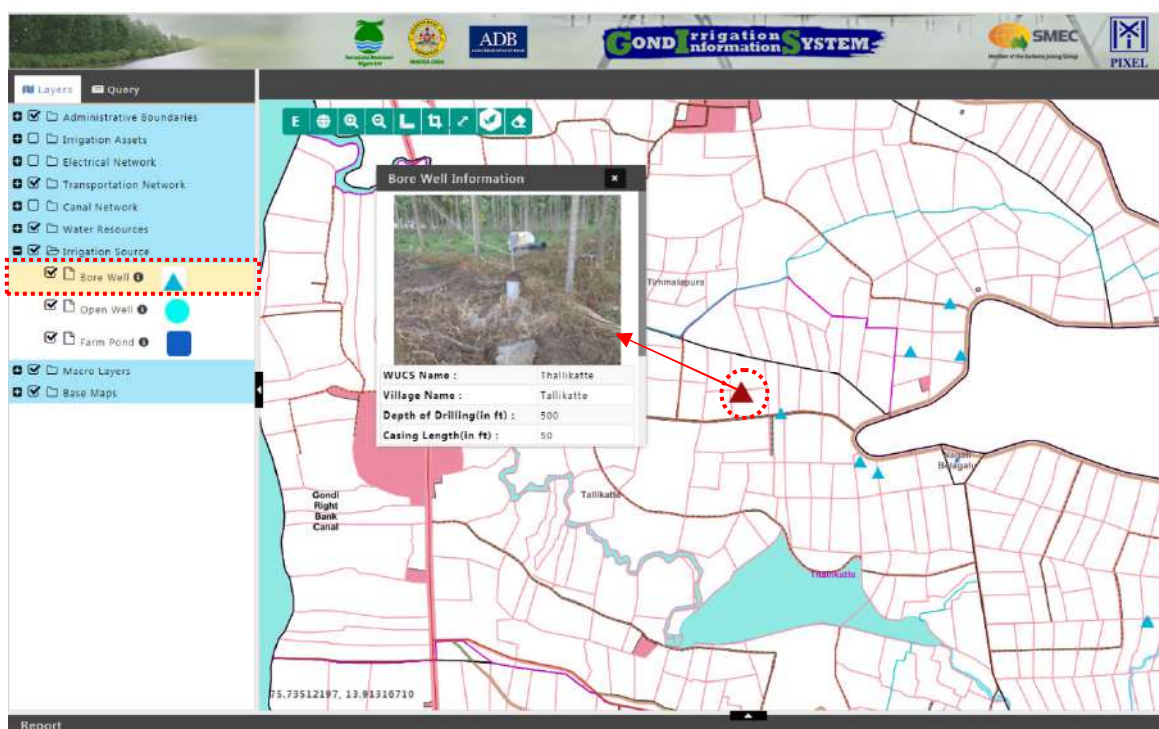

Fig. 5.20

Under **Macro layers**, following layers have been provided

- Parliamentary Constituency
- Assembly Constituency
- District
- Taluk
- Hobli
- Grama Panchayath
- Village
- Major road
- Village road
- Major Settlement
- Canals
- Command boundary
- Water Resource

When all the themes under Macro layer are kept ON by clicking square button provided against each layer, GIS map gets displayed as shown in Fig. 5.21.

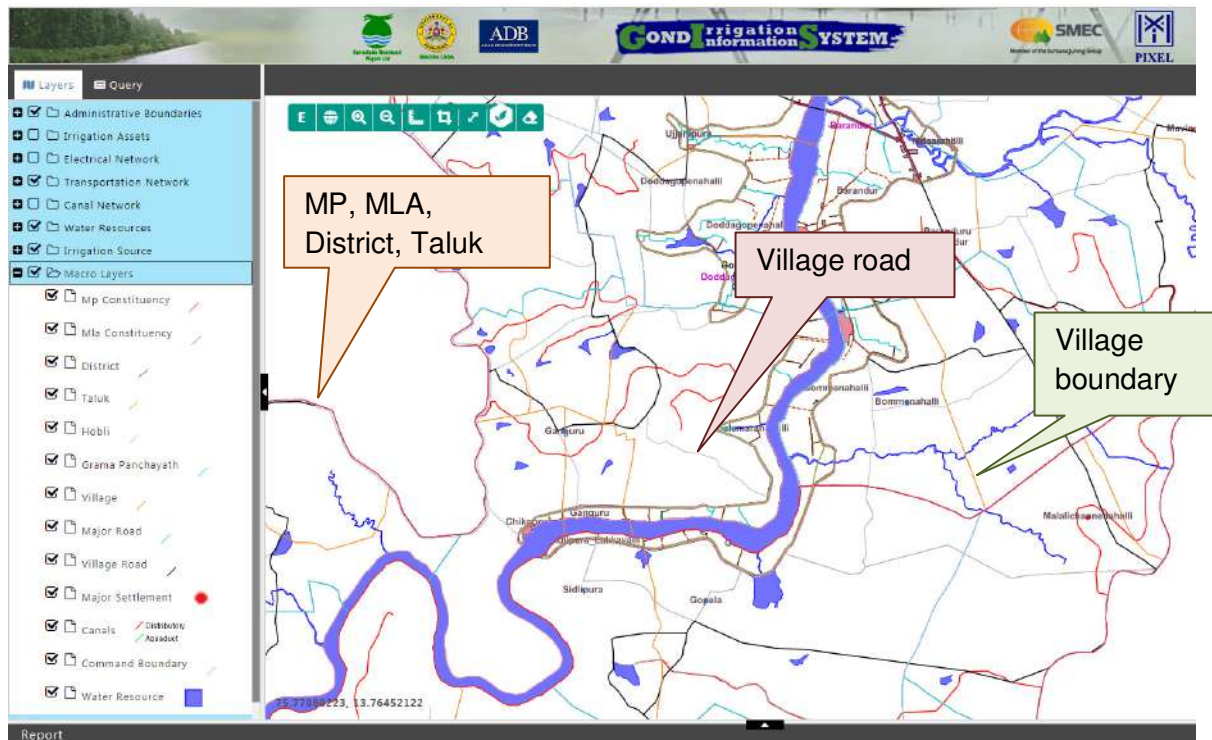

Fig. 5.21

Under **Base maps**, Bing map Aerial view and Bing map road are shown. To view satellite image of Gondi Irrigation project, user has to click on square button provided against Bing map Aerial view. Upon clicking, application will display image as shown in Fig. 5.22.

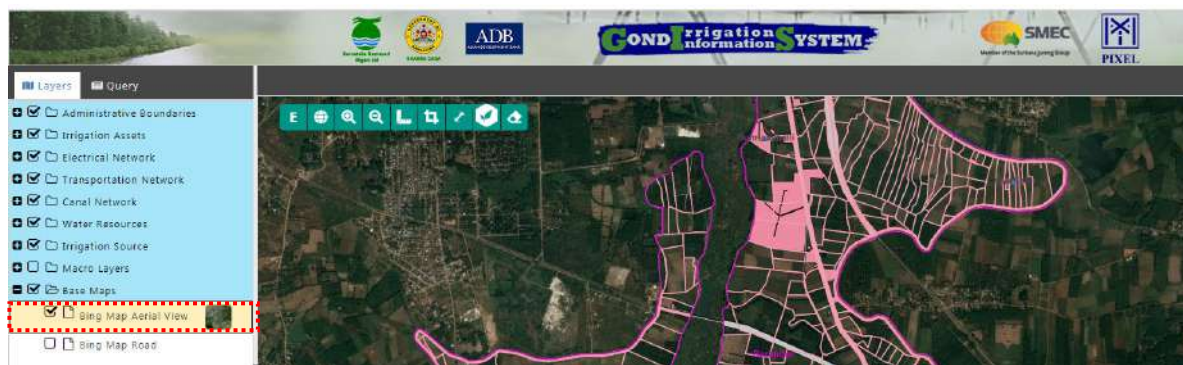

Fig. 5.22

Similarly, click on square button provided against Bing map road will display map as shown in Fig. 5.23.

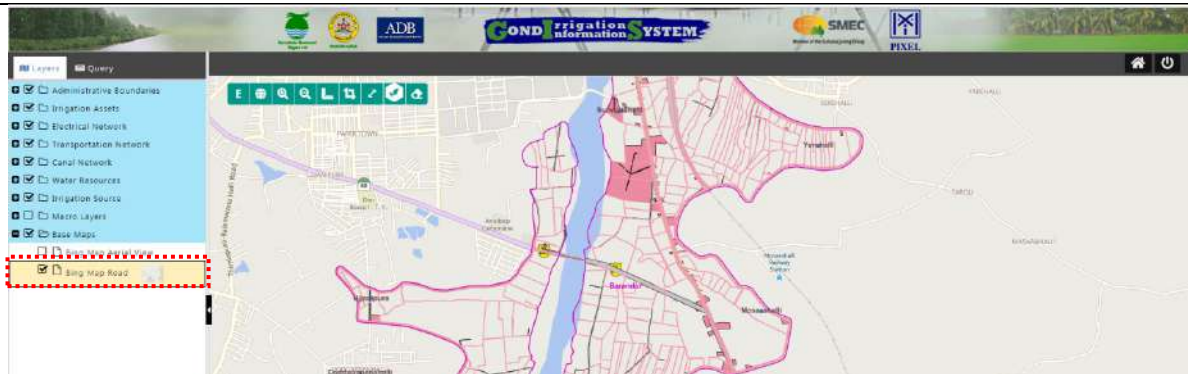

Fig.5.23

5.2 Spatial query

Under the Spatial query facility to view Crop water requirement, Pipe outlet details, Asset details, Crop details and Irrigation cess have been provided. User is allowed to select required query parameters from drop down lists and able to get result in terms of maps and reports.

5.2.1 Crop water requirement

Under this query, user will be able to get Crop water requirement from Canal level to Pipe outlet level, season or month wise for a particular year. To do this user has to click on "Query" provided under "Spatial view" menu. By clicking this, application displays drop down list containing various queries. Then user has to select "Crop Water Requirement" query. Upon selection application will allow user to select at what level (Canal to Pipe outlet) crop water requirement to be shown as shown in Fig. 5.24.

Fig. 5.24

To demonstrate the functionality, following parameters have been selected from drop down lists;

- Level as Canal
- Canal as Left Bank Canal
- Duration type as Season wise
- Year as 2018-2019 and
- Month as November as shown in Fig. 5.25

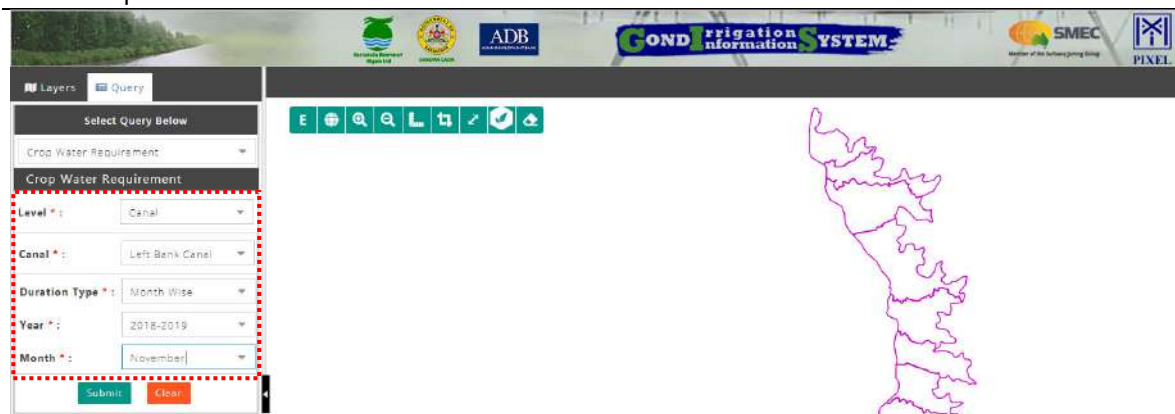

Fig. 5.25

After the selection "Submit" button has to be clicked. Once this button is clicked, application will display map showing plots having various crops during the selected month. Also, report containing crop wise water requirement gets displayed with an option to Copy, export to Excel and Print as highlighted in Fig. 5.26.

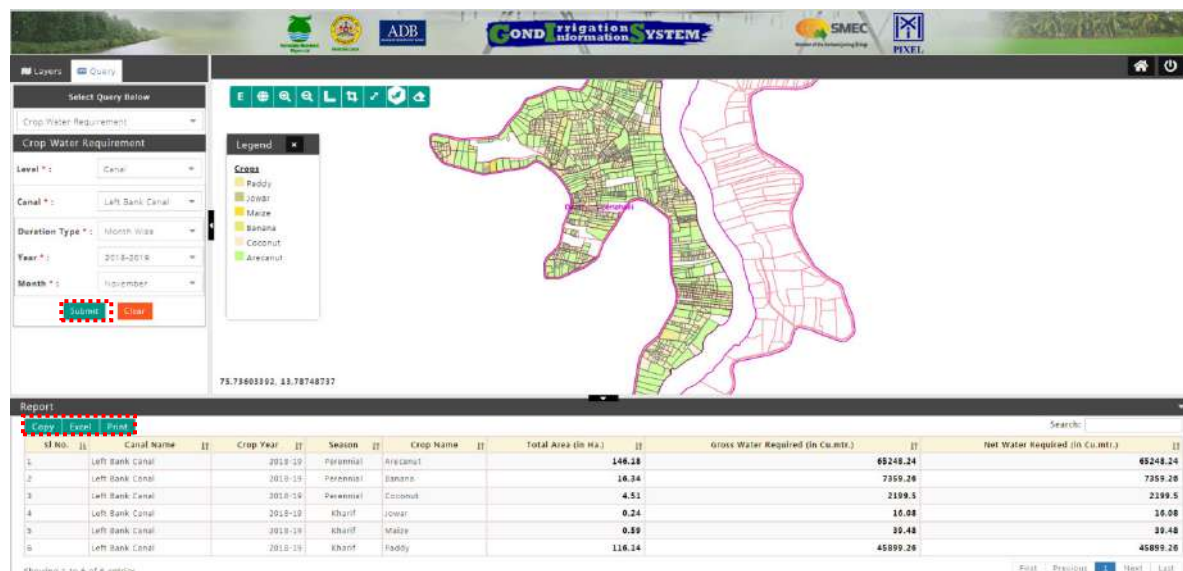

Fig. 5.26

5.2.2 Command under each Pipe outlet (Pipe outlet details)

Under this query, user will be able to get area figuring under selected Pipe outlet with plot wise crops grown (latest season). To do this user has to click on "Query" provided under "Spatial view" menu. By clicking this, application displays drop down list containing various queries. Then user has to select "Pipe outlet details" query. Upon selection application will allow user to select WUCS and corresponding Pipe outlet from drop down lists. For example, Pipe outlet No. DPO 48 figuring under Seegebagi WUCS has been selected as shown in Fig. 5.27.

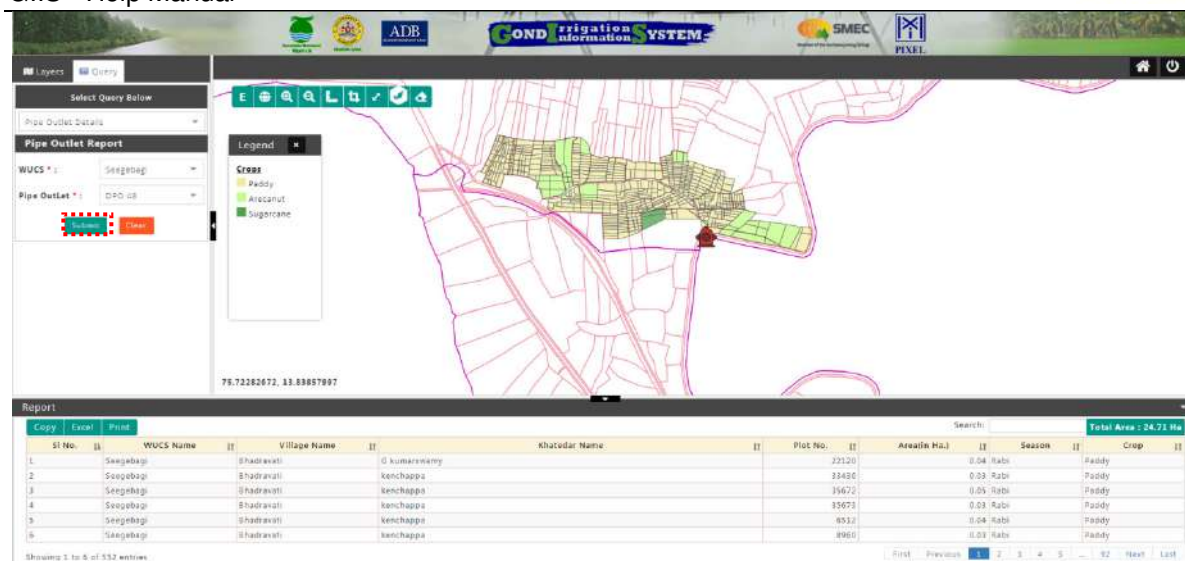

Fig. 5.27

After the selection "Submit" button has to be clicked. Once this button is clicked, application will display map showing plot wise crop grown during the latest season with the report. Click on any plot on report, would highlight location of that plot on map as shown in Fig. 5.28.

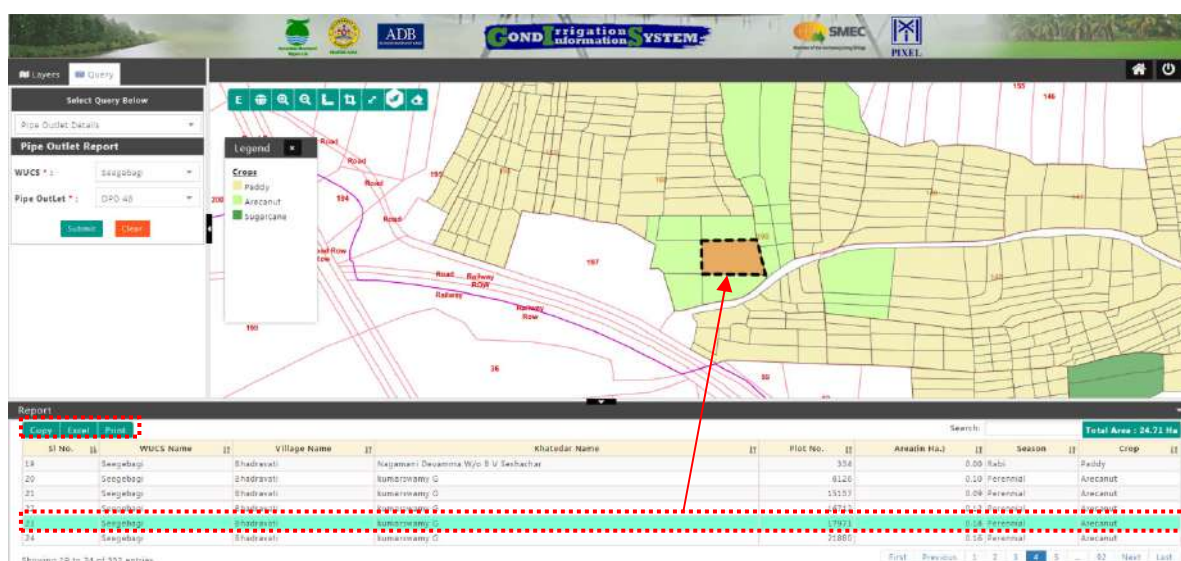

Fig. 5.28

Generated report can be copied, exported to Excel format and Printed by clicking appropriate button as highlighted in Fig. 5.28.

5.2.3 Asset details

In order to view WUCS wise location and number of irrigation assets, user has to click on "Query" provided under "Spatial view" menu. By clicking this, application displays drop down list containing various queries. Then user has to select "Asset details" query. Upon selection application will allow user to select WUCS from drop down list. In the present example, Baballi WUCS has been selected by clicking on "Submit" button. Once this button

is clicked, application will display map showing location of various irrigation assets present under selected WUCS area with report as shown in Fig. 5.29.

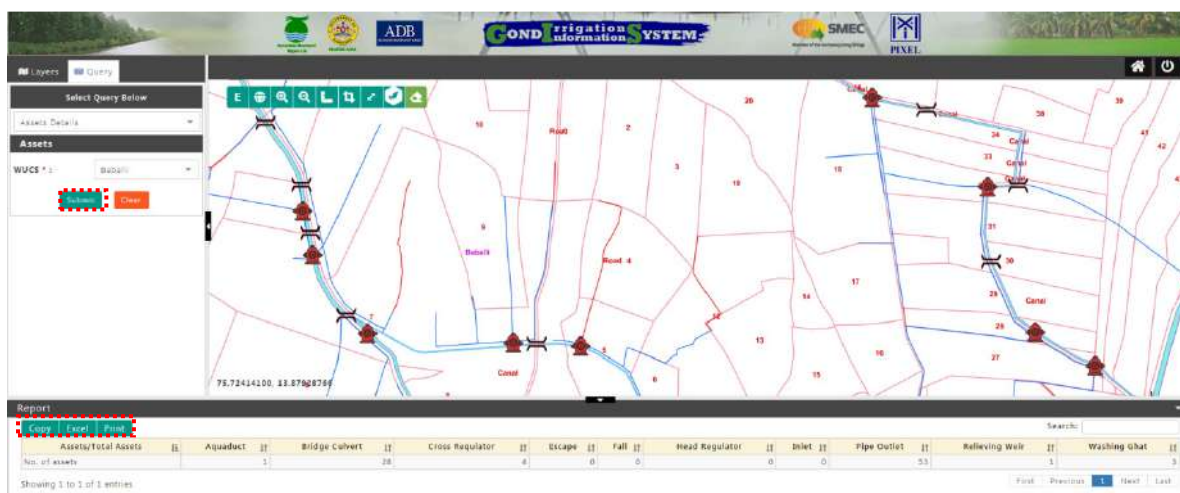

Fig. 5.29

Generated report can be copied, exported to Excel format and Printed by clicking appropriate button as highlighted in Fig. 5.29.

5.2.4 Crop details

To view plot ownership and latest crop details, user has to click on "Query" provided under "Spatial view" menu. By clicking this, application displays drop down list containing various queries. Then user has to select "Crop details" query. Upon selection, application will allow user to select WUCS from drop down list. In the present example, Thalikkatte WUCS has been selected by clicking on "Submit" button as shown in Fig. 5.30.

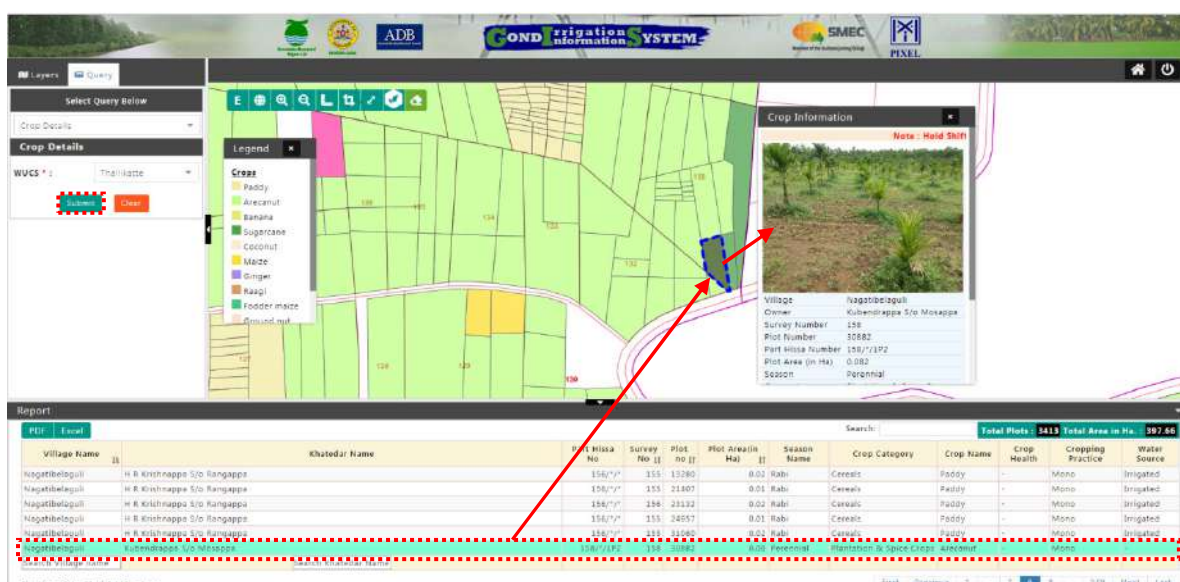

Fig. 5.30

Once "Submit" button is clicked, application will display map showing plot wise crop grown during the latest season with the report. Click on any plot on report, would highlight location of that plot on map and further click on plot displays photograph of that plot with more

details as highlighted in Fig. 5.30. Generated report can be exported to Excel and PDF formats by clicking appropriate button.

5.2.5 Irrigation Cess

To get WUCS and plot wise cess for a season or a month in the particular year, user has to click on "Query" provided under "Spatial view" menu. By clicking this, application displays drop down list containing various queries. Then user has to select "Irrigation cess" query. Upon selection, application will allow user to select WUCS, PO command, Year and Month from the drop down lists. In the present example, following parameters have been selected;

- WUCS as Thallikatte
- Pipe outlet as DPO 71
- Year as 2018-19
- Month as November

Further to click on "Submit" button, application will display map showing plot wise standing crop along with report containing water cess. Click on any plot on report, would highlight location of that plot on map. Generated report can be copied, exported to Excel and Printed by clicking appropriate button as highlighted in Fig. 5.31.

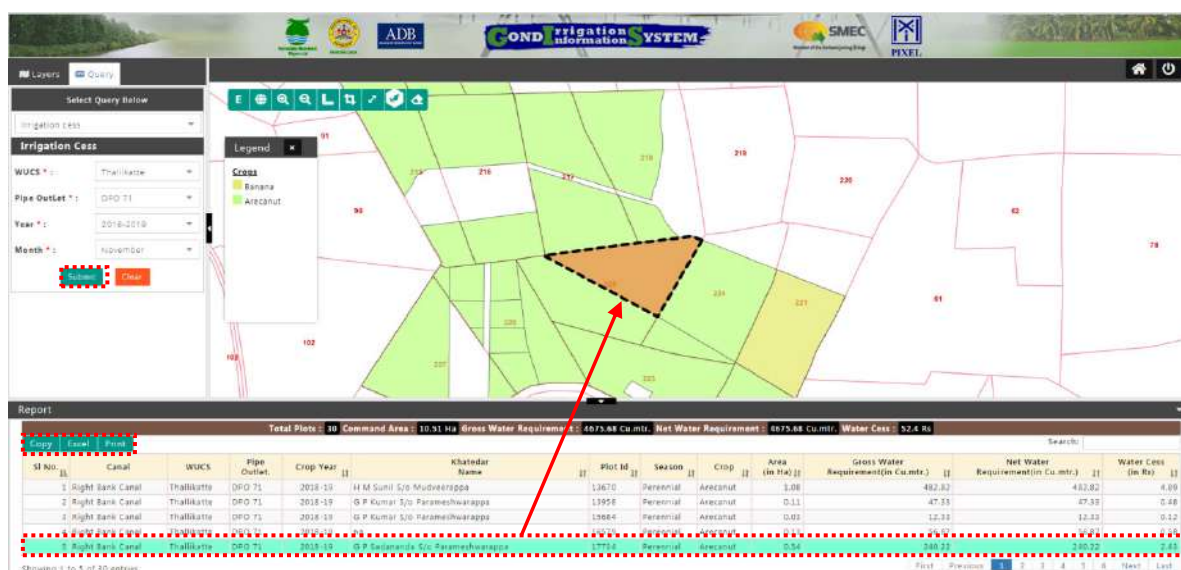

Fig. 5.31
